10290131\_frc.pdf

Sherry,

One sample from the Tower site had 2 low-level ppb estimated results for xylenes. Unfortunately, it is from the home closest to the Tower site on the east side of the lake. I have to check screening levels but I don't think there is anything to be alarmed about. However, I am sure the Tribe will want to discuss, and I already offered to talk with them within the next week or so.

Resampling should occur in February if we are able to follow the assumed schedule. The detections can be found on the summary page of the lab results.

Hi Kristen,

I received your call regarding the analytical results for the three tap water samples you submitted for us. Attached are the analytical results. The "J" flag adjacent a results means that the result is an estimated value and the "B" means the result may be elevated due to method blank contamination.

Please email or call if you have questions. Thank you again Kristen for your help.

I hope you have a Happy New Year!

**Julie Sharp-Dahl**
